Summary

Computer Engineer, focus on Fullstack Web Development and data-driven applications. Hands-on experience in machine learning pipelines and real-time prediction systems. Currently pursuing a Master's degree in Computer Engineering with a focus on AI and image processing.

Education

Computer Engineering Master Degree | Afyon Kocatepe University
(2026 - 2028 (date expected))

Computer Engineering Bachelor's Degree | University of Turkish Aeronautical Association
(2019-2025)

Technical Skills

Languages: Python, JavaScript (ES6+), Java (J2EE), CFML, C++, C#, SQL, HTML5, CSS3

Frameworks & Libraries: FastAPI, AngularJS, Bootstrap 5, jQuery, Node.js, Express.js, REST API, Unity

Data & Machine Learning: Python, Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, OpenCV, CNN / U-Net

Tools & Technologies: Git, GitHub, Power BI, Excel, AutoCAD, Rhinoceros, Workcube

Concepts: OOP, Data Structures, REST API Design, Responsive Web Design, Agile/Scrum, CI/CD, Image Processing, Data Pipelines

Language

English – B1/B2 (Intermediate)

Turkish - Native

Experience

Project Assistant (Technical & Production)

Natur Stone Madencilik | Mar 2026–Present

- Analyzed and optimized AutoCAD drawings to improve production efficiency, converted 2D technical drawings into 3D models using Rhinoceros for manufacturing processes
- Supported cost analysis and pricing strategies for manufactured products
- Monitored end-to-end production pipeline from manufacturing to shipment
- Built Excel-based reporting systems for tracking production and operational data
- Converts designed 3D models into cutting codes (G-code) using PowerMill & RhinoCAM

Jr. Backend Developer (Workcube Developer)

Çetintaş Teknoloji | *Nov2024 – Jun2025*

- Debugged and improved ColdFusion-based backend systems, increasing system stability and reducing runtime errors
 - Designed and optimized SQL Server queries for data processing, reporting, and data cleaning workflows
 - Collaborated with cross-functional teams in Agile/Scrum environments to deliver backend features on schedule
 - Contributed to data pipeline improvements and ensured data consistency across systems
-

Game Developer Intern (Long-Term)

Easy Clap Games | *Jun 2023–Jul 2024*

- Contributed to hyper-casual mobile game development using Unity
 - Worked in Agile/Scrum teams for task tracking and collaboration
 - Participated in a TÜBİTAK-supported VR project integrating AI with virtual environments
Forensics VR (Participation in the project) "3230721 - Development of an Artificial Intelligence-Supported Virtual Reality Application for TÜBİTAK Genetics Education"
-

Software Engineering Intern

ESEN System Integration | *Jul 2022 – Aug 2023*

- Developed and optimized algorithms using object-oriented programming (C++) Improved code structure and maintainability through modular design principles

Projects

Deep Space Galaxy Segmentation & Analysis

- Designed and implemented a machine learning pipeline for galaxy segmentation
- Applied CNN-based models and image processing techniques for high-precision detection
- Processed large-scale astronomical datasets for pattern recognition

Iris Species Prediction API (End-to-End ML Service)

Built and deployed a real-time prediction API using FastAPI and Uvicorn Transformed a machine learning model into a production-ready RESTful service Enabled low-latency inference for classification tasks

GeoNavigator (Unity - GPS Based System)

Developed a real-time GPS-based positioning system in Unity
Integrated location data into a 3D environment for interactive navigation
